

## Accessing CantarX3 and CantarMini audio files with File Browser Pro for Mac

With MacOS X 10.15 and later, the Samba server used in the X3 and CantarMini is no longer compatible with Mac devices via WIFI or Ethernet. Direct access to the recorders, without third-party software, is no longer possible with these MacOS systems. An alternative solution is to download and use the FileBrowser Pro application. <https://www.stratospherix.com/products/filebrowser/>

### Accessing the audio files through the Ethernet port :

Connect the Mac device Ethernet port to the recorder's Ethernet port

#### On the recorder:

- Go to the **TECHNICAL SETTINGS** menu to enable the **File network access**

Parameter	Value
